

What Is Claimed Is:

1. A process for preparing a detergent tablet, comprising the step of contacting a liquid binder to a base powder, wherein said liquid binder comprises a nonionic surfactant and a dissolution aid.
2. A process according to claim 1, whereby said base powder comprises an agglomerated particle.
3. A process according to any claim 1, whereby the mean particle size of said base powder is from 100 micrometers to 2000 micrometers.
4. A process according to claim 1, whereby said base powder has a bulk density of from 400g/l to 900g/l.
5. A process according to claim 1, whereby said liquid binder is free from polyethylene glycol.
6. A process according to claim 1, whereby said dissolution aid comprises  $C_{4-10}$  diol.
7. A process according to claim wherein said dissolution aid is selected from the group consisting of 1,4-cyclohexanediol, 1,6-hexanediol and 2,2,4 trimethyl 1,3 pentanediol.
8. A process according to claim 1, whereby said dissolution aid comprises an ethoxylated cationic diamine.
9. A process according to claim 1, whereby said nonionic surfactant comprises a  $C_{12}-C_{18}$  predominantly linear primary alcohol condensed with an average of from 5 to 9 moles of ethylene oxide.
10. A detergent composition in the form of a tablet, obtainable by a process according to claim 1.
